#### FRESH MARKET PRICE AND YIELD DATA, 2007 VEGETABLES AND FRUIT

New England Agricultural Statistics is responsible for collecting, analyzing, estimating, and publishing fruit and vegetable prices and yields at the request of the USDA Farm Service Agency (FSA). Funding was provided by the Departments of Agriculture State in Massachusetts, New Hampshire, Rhode Island, and Vermont. This data series is provided as a valuable tool for growers to use in making production and marketing decisions and for State FSA offices to administer farm programs. It is also used by Cooperative Extension to provide needed outreach and education, and for the State Departments of Agriculture to assist growers.

Over 2,500 tree fruit, berry and vegetable growers were contacted in October and November of 2007 in the six-state region. Approximately 1,900 producer responses were tabulated for this publication. Producers in Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont were asked to provide acreage, production, wholesale and retail price information for tree fruits, berries and 28 selected vegetable crops.

Published prices and yields do not distinguish between organically and conventionally grown products. In 2007, approximately 19% of respondents indicated that their operations produced organic products for sale according to the National Organic Standards.

The survey was designed to provide state and regional prices and yields for selected fruit and vegetable commodities which are not in the National Agricultural Statistics Service (NASS) estimating program. The following fruit and vegetable crops are in the NASS estimating program and can be found in their respective sections of this publication: potatoes (ME, MA, RI), sweet corn (CT, ME, MA, NH, RI, VT), apples (CT, ME, MA, NH, RI, VT), peaches (CT, MA), pears (CT), cranberries (MA, ME) and wild blueberries (ME).

The success of this project is credited to the cooperation of the thousands of growers across New England. We sincerely appreciate their time and effort in supplying crop information. As with all NASS survey work, individual grower information is kept strictly confidential and is exempted from requests under the Freedom of Information Act. The individual reports were only used in combination with other reports to establish state and regional estimates. Estimates in this report that could disclose individual farm data were recorded as a "D".

Fresh Market Vegetables (Crop Summary): Less than optimum weather conditions brought many challenges to vegetable growers in 2007. Wet weather during April and high soil moisture levels in early May delayed the start of field work for many farmers. Sunny skies and warmer temperatures during the second week of May pushed along crop development. By mid-month, moderate to heavy rains slowed field work once again, and nighttime low temperatures brought the threat of a late spring frost. Much warmer weather arrived on May 24 and remained throughout the Memorial Day weekend. Producers planted early season vegetables throughout the month of May, while also harvesting asparagus, rhubarb, spinach, and lettuce. Producers were active harvesting early season vegetables and transplanting tomatoes and peppers

throughout the month of June. Dry conditions that month persisted into July, forcing farmers to irrigate where possible. Showers finally arrived in mid-July, bringing much needed moisture to the region. Although the rainfall was welcome at most locations, the storms brought hail damage to farms in New Hampshire and flooding to vegetable fields in Vermont. Sweet corn harvest was underway at most locations by mid-July, with a quarter of the crop picked by the end of the month. Farmers kept markets well supplied with an abundance of fresh, local produce throughout July and August, with many growers reporting an exceptional year. Fall vegetable harvest was in full swing in September, and farm stands were busy selling pumpkins, squash and fall decorations. Harvest of most summer vegetable crops had drawn to a close by month's end, however warm conditions in September extended the growing season for many late planted crops. Lack of a major frost allowed vegetable producers to continue harvesting late variety sweet corn, tomatoes, peppers and fall vegetable crops in October.

Fresh Market Vegetables (Survey Specifics): The "All Price per Pound" column includes fresh market vegetables only, and represents the average price received by growers at the point of first sale, including both retail and wholesale prices. New England's agricultural proximity to large populations have encouraged farmers to market directly to the public through roadside stands and "Pick Your Own" (PYO) ventures; thus, commanding the higher retail price at many farm locations. Differences in average prices between states for an individual crop are largely attributed to the amount of crop sold retail or wholesale in that state. Most vegetable growers were able to provide price data; however, production figures were unavailable from a large number of reporters. The yield data series was modified from providing a yield that would represent a total state average, to publishing the average yield from reports tabulated.

Berries for Fresh Market (Crop Summary): Wet weather at the beginning of spring delayed berry development until the second week of May. Warm weather followed, providing ideal pollination conditions for both strawberries and raspberries. Berry growers reported that dry, cool weather in early July delayed crop maturation. By the latter part of July, favorable weather had improved maturity of berries. Strawberry harvest was complete by July 22 and producers reported an abundant, high quality crop. Warm conditions in July enhanced the growth of cultivated blueberries and fall raspberries and allowed harvest to remain ahead of schedule.

Berries for Fresh Market (Survey Specifics): Price and yield data are published for cultivated blueberries, raspberries and strawberries sold for fresh market only. The "All Price Per Pound" published includes fresh market berries only and represents the average price received by growers at the point of first sale, which includes both retail and wholesale prices. Most berry growers were able to provide price data; however, production figures were unavailable from a large number of reporters. The yield data series was modified from providing a yield that would represent a total state average, to publishing the average yield from reports tabulated.

Fresh Market Peaches and Pears (Crop Summary): Wet conditions in April delayed peach bloom from one to two weeks across New England. Clear, sunny skies in mid-May however, provided excellent pollination conditions during peak bloom at most locations. Late June storms brought hail, causing significant damage in some orchards. July and August arrived with drier weather, keeping fruit size in the "average" range for much of the growing season. Harvest was complete by early October, with most orchards realizing heavier yields than a year earlier. Cool, wet weather during bloom provided less than optimum pollinating conditions for New England's pear crop. Warmer temperatures arrived in May, providing good growing conditions. Hail damage and dry conditions during the summer months kept pear yields at or below

Yield per

previous year at many orchards. Pear harvest was complete by mid-October.

Fresh Market Peaches and Pears (Survey Specifics): Peach data is based on reports from orchards with ten or more peach trees. Pear data is based on reports from orchards with ten or more pear trees. Price and yield data are published for peaches and pears sold for fresh market only and represent the average price received by growers at the point of first sale, which includes both retail and wholesale prices. Yield per bearing acre for all tree fruit crops is based on total production, which includes unharvested production and fruit harvested but not sold due to market restrictions. Yield also includes reports from orchards with bearing acreage and no production in 2007.

<sup>1</sup> Fresh market vegetable yield data is based on production from farms with 0.25 acres or more harvested of specified crop. Price data is based on reports from farmers with 0.10 acres or more harvested of specified crop.

Number of farms reporting production or yield.

Total tabulated pounds produced per acre harvested.

Note trabulated pounds produced per acre narvested.
 Number of farms reporting the specified vegetable price.
 Average price per pound received at point of first sale. Fresh market average of retail and wholesale sales.
 New England includes ME, MA, NH, RI, and VT.
 D Data withheld to avoid disclosing information for individual farms.

<sup>Teresh market vegetable yield data is based on production from farms with 0.25 acres or more harvested of specified crop. Price data is based on reports from farmers with 0.10 acres or more harvested of specified crop.

Number of farms reporting production or yield.

Total tabulated pounds produced per acre harvested.

Number of farms reporting the specified vegetable price.

Average price per pound received at point of first sale. Fresh market average of retail and wholesale sales.

New England includes ME, MA, NH, RI, and VT.

D Data withheld to avoid disclosing information for individual farms.</sup>

Fresh market vegetable yield data is based on production from farms with 0.25 acres or more harvested of specified crop. Price data is based on reports from farmers with 0.10 acres or more harvested of specified crop.

Number of farms reporting production or yield.

Total tabulated pounds produced per acre harvested.

Number of farms reporting the specified vegetable price.

Average price per pound received at point of first sale. Fresh market average of retail and wholesale sales.

New England includes ME, MA, NH, RI, and VT.

D Data withheld to avoid disclosing information for individual farms.

Fresh market vegetable yield data is based on production from farms with 0.25 acres or more harvested of specified crop. Price data is based on reports from farmers with 0.10 acres or more harvested of specified crop.
 Number of farms reporting production or yield.
 Total tabulated pounds produced per acre harvested.
 Number of farms reporting the specified vegetable price.

<sup>&</sup>lt;sup>5</sup> Average price per pound received at point of first sale. Fresh market average of retail and wholesale sales.

<sup>&</sup>lt;sup>6</sup> New England includes ME, MA, NH, RI, and VT.

D Data withheld to avoid disclosing information for individual farms.

Price data is based on reports from farmers with 0.10 resh market berry yield data is based on production from farms with 0.25 acres or more harvested of specified crop.

Number of farms reporting production or yield.

Total tabulated pounds produced per bearing acre harvested.

Number of farms reporting a berry price.

Average price per pound received at point of first sale; fresh market average of retail and wholesale sales.

New England includes ME, MA, NH, RI, and VT.

D Data withheld to avoid disclosing individual farm information.

Peach and pear data is based on production from orchards with ten or more peach trees or ten or more pear trees.

<sup>2</sup> Number of farms reporting production or yield.

D - Data withheld to avoid disclosing individual farm information.

<sup>&</sup>lt;sup>3</sup> Yield per bearing acre is based on total production, which includes unharvested production and fruit harvested but not sold due to market restrictions. Yield includes reports from orchards with bearing acreage and no production. Yields from pear trees grown on wire excluded.

Number of farms reporting fresh market price.

Average fresh market price received by farmers at point of first sale.

New England includes ME, MA, NH, RI, and VT.
